Duration:
01/08/2011 - 31/07/2013

Lifelong
Learning
Programme

This project is funded by the European Commission as a Leonardo Learning Partnership under the Lifelong Learning Programme.

BACKGROUND

In the actual evolution of technic the specialists are making efforts for improve the technologies and the products to obtain a better environment protection, an energetic efficiency, more possibilities to recover and recycling materials. All this efforts can not be successful without a specific education in all the technical domains. The new specialists we qualify will have to be able to put the correct price on the wasted materials that results from the industrial activity they are trained for and to look for solutions of reducing the waste and the energetic consumption .

OBJECTIVES

- To discover new methods and instruments for vocational education and training based on interdisciplinarity that will be used to form the future professionals in order to valuate the wasted materials and to be able to find solutions to decrease the energy consumption
- To realize the transfer of the innovative based on interdisciplinarity methods of education from a country to another by international exhibitions , workshops and sessions of scientific communications
- To create a communication network of educational institutions and organizations that will promote the good practices and the results of the project in order to increase the quality in VET and the interest of future professionals in the research of practical solutions that will reduce the waste in all the technical domains.

ACTIVITIES

Interdisciplinary teachers-students team workshops

- consists of practical exercises and research about the specific waste from the domain they learn
- realized by each partner will be included as possible in current learning activities
- will have the purpose to find solutions to reduce, recycle or reuse the spoilage

International workshops for VET trainers

- exchange of experience
- exchange of good practice examples
- about new working methods and new learning instruments useful for Vocational Education

International scientific communications session

- with the participation of students and trainers of each partner
- to present research, studies, experiments and results about waste reduction, energetic efficiency, sustainable development and environmental protection.

International exhibition

- present the results of all local team work activities
